Block Parameters: Transfer Fcn	$\times$
Transfer Fcn	
The numerator coefficient can be a vector or matrix expression. The denominator coefficient must be a vector. The output width equals to number of rows in the numerator coefficient. You should specify the coefficients in descending order of powers of s.	he
'Parameter tunability' controls the runtime tunability level for numerator and denominator coefficients. 'Auto': Allow Simulink to choose the most appropriate tunability level. 'Optimized': Tunability is optimized for performance. 'Unconstrained': Tunability is unconstrained across the simulation targets.
